IDENTIFIERS	*United States

ABSTRACT

This second volume of a two-volume study contains statistical analyses of the school funding systems in each of the 50 States. Three tables document existing disparities in the States' methods of raising and distributing funds for education. A fourth table indicates the approximate additional cost of equalizing per-pupil expenditure within each State. (For related document, see ED 058 473.) (DB)

Review of Existing State School Finance Programs

Volume II

Documentation of Disparities in the Financing of Public Elementary and Secondary School Systems— By State

A Commission Staff Report

Submitted to The President's Commission on School Finance

THIS IS ONE OF SEVERAL REPORTS PREPARED FOR THIS COMMISSION. TO AID IN OUR DELIBERATIONS, WE HAVE SOUGHT THE BEST QUALIFIED PEOPLE AND INSTITUTIONS TO CONDUCT THE MANY STUDY PROJECTS RELATING TO OUR BROAD MANDATE. COMMISSION STAFF MEMBERS HAVE ALSO PREPARED CERTAIN REPORTS.

WE ARE PUBLISHING THEM ALL SO THAT OTHERS MAY HAVE ACCESS TO THE SAME COMPREHENSIVE ANALYSIS OF THESE SUBJECTS THAT THE COMMISSION SOUGHT TO OBTAIN. IN OUR OWN FINAL REPORT WE WILL NOT BE ABLE TO ADDRESS IN DETAIL EVERY ASPECT OF EACH AREA STUDIED. BUT THOSE WHO SEEK ADDITIONAL INSIGHTS INTO THE COMPLEX PROBLEMS OF EDUCATION IN GENERAL AND SCHOOL FINANCE IN PARTICULAR WILL FIND MUCH CONTAINED IN THESE PROJECT REPORTS.

WE HAVE FOUND MUCH OF VALUE IN THEM FOR OUR OWN DELIBERATIONS. THE FACT THAT WE ARE NOW PUBLISHING THEM, HOWEVER, SHOULD IN NO SENSE BE VIEWED AS ENDORSEMENT OF ANY OR ALL OF THEIR FINDINGS AND CONCLUSIONS. THE COMMISSION HAS REVIEWED THIS REPORT AND THE OTHERS BUT HAS DRAWN ITS OWN CONCLUSIONS AND WILL OFFER ITS OWN RECOMMENDATIONS. THE FINAL REPORT OF THE COMMISSION MAY WELL BE AT VARIANCE WITH OR IN OPPOSITION TO VIEWS AND RECOMMENDATIONS CONTAINED IN THIS AND OTHER PROJECT REPORTS.

PART II

Analysis of Inter-District Disparities in Resources for Education

ANALYSIS OF INTER-DISTRICT DISPARITIES IN RESOURCES FOR EDUCATION

The documentation of disparities in education has been attempted many times, by many different organizations and study groups, and it is safe to say that in no two of those studies were the results the same.

This indicates the complexity of developing a methodology that would be acceptable to all, as well as the fact that the basic data itself does not lend itself to easy categorization.

The staff of the President's Commission on School Finance have now joined the ranks of the many who have attempted to document disparities in education. We do not claim exclusive rights to validity. We merely present this data in the manner which has been most helpful to enable us to conduct our subsequent analyses.

This documentation of disparities is designed to illustrate the extent of disparities in school financing systems of the 50 States. Four different series of data are presented for each State, along with summary tables, for all States, in order that several facets of each State's financing system can be considered.

Disparities have been arrayed for each State in the following series:

1. Per-pupil expenditure disparities, by school district
2. Per-pupil property valuation disparities, by school district
3. Per-pupil revenue disparities, by source of funds, for selected school districts
4. Cost of equalizing expenditures to various pupil percentile levels.

Analysis of Inter-District Disparities in Resources for Education

Summary tables appearing in this document are:

1. School district per-pupil expenditure disparities, by State (pag
2. School district per-pupil property valuation disparities, by Sta
3. Cost of equalizing expenditures to various pupil percentile leve
   by State (page 15)
4. Selected items from each type disparity, by State (page 16)

At the outset of this analysis it should be stated that States differ mark
their administrative and accounting practices. For instance, States asses
to market value. And even in States with property tax equalization boards
such that administrative practices vary widely from community to community

Each State defines per-pupil expenditure on a different basis. For exampl
retirement costs or State administration costs are charged back to per-pup
these costs are not charged back. Likewise many States have a large numbe

umber of districts.

the States can only be made by using the State-wide average expenditure. The U.S. Office
sted State data to make them essentially comparable. Because of the wide variations of
xpenditure from State to State, the district average expenditure is applicable only within

er-pupil expenditure levels have been displayed within three percentile ranges: 0 - 100th,
h. Ratios within each percentile range are determined by dividing the maximum per-pupil
nimum per-pupil expenditure. These ranges indicate the extent of expenditure disparity within

greatly in enrollment and intra-district expenditure disparities are often very substantial.
t percentile ranges for the first table in each state display expenditure disparities among
lictions, not disparities among individual pupil expenditure levels. Extremely high expend-
excess of about $1,500) are usually found in small, inefficiently organized school
l districts established for the exclusive purpose of educating exceptional children. Since
always enroll only a few pupils and since the added expense is sometimes justifiable on the
need, the best measures of disparities occur at the 5th - 95th and 10th - 90th percentile
percentile ranges, many special school districts are eliminated.

re county-wide school districts predominate, there are few, if any, small or special school
se States the best measure of disparities occur between the 0 - 100th or 5th - 95th percentile

Analysis of Inter-District Disparities
in Resources for Education

Even when districts in the top and bottom 10 percent of the expenditure r
are still very great. For example, in California, expenditures per pupil
within the 10th to 90th percentiles. In Wyoming, the State with the grea
range extends from a low of $704 per pupil to a high of $3,132, even when
eliminated.

Of course, few would contend that complete equality of expenditures is de
among regions within States and among different groups of pupils. Howeve
of tables indicate that expenditure disparities are, at least in large pa

SERIES II - PER-PUPIL PROPERTY VALUATION DISPARITIES, BY SCHOOL DISTRIC

It is well known that the property tax is the major source of local fundi
to appear for each State displays variations in assessed valuation per pu
assessed valuation was used; otherwise, locally-assessed valuation was em
taxable wealth. All data for this series of charts was supplied by the
Educational Finance Project.

Only unified districts (i.e., through grade 12) with enrollments in exces
in this analysis by the N.E.F.P. Therefore, the number of districts unde
smaller than the number considered in the per-pupil expenditure series o
represent extremes in school district wealth. Thus, by eliminating small
total State-wide disparities are substantially reduced. Still, in most S
inter-district disparities are in the range of 5 to 1 and within the 10t
school districts in assessed valuation per pupil vary from a high of 5.9
in New Hampshire.

At every disparity level, the difference among school districts in asses
the difference in expenditure per pupil. There are two reasons for this

.E.F.P. Therefore, the number of districts under consideration is substantially
onsidered in the per-pupil expenditure series of tables. Some very small districts
ool district wealth. Thus, by eliminating small and special school districts,
ies are substantially reduced. Still, in most States, the charts show that total
s are in the range of 5 to 1 and within the 10th - 90th percentiles. Ratios among
sed valuation per pupil vary from a high of 5.9 to 1 in New Mexico to a low of 1.6

the difference among school districts in assessed valuation per pupil far exceeds
ture per pupil. There are two reasons for this. First, most States distribute
lizing manner, with the greatest amount of State revenue distributed to the poorest
ny instances poorer school districts tax themselves at higher rates than do wealthier

school districts. Both these factors tend to mitigate disparities in expenditure. However, it is a cruel measure of equality which forces some districts to tax themselves far above average to achieve only moderate expenditure levels.

SERIES III - PER PUPIL REVENUE DISPARITIES, BY SOURCE OF FUNDS, FOR SELECTED SCHOOL DISTRICTS

From the data on assessed valuation of property, the National Educational Finance Project selected 17 school districts within each State representative of the range in taxable resources. We have arrayed these districts from wealthiest to poorest in assessed valuation per pupil. Thus, in Alabama, for instance, Jefferson County is the wealthiest and Athens is the poorest.

This series also has been developed to provide a general idea of the extent of disparities in property values within any State. This can be ascertained by looking at the column headed, "Property Tax -- Potential yield at 10 Mill Rate." In California, for example, a tax of 10 mills would yield Beverly Hills, the wealthiest district, about $472 per pupil. On the other hand, Travis, the poorest district in the sample, would receive only about $19 per pupil with the same tax rate. Of course, these facts are extremely important in explaining why the average expenditure per pupil in Beverly Hills is $1,283, while the average per pupil expenditure in Travis is only $767.

The column headed "Property Tax -- Rate Necessary for Local Revenue in Mills" shows the mill rate that would be necessary if the property tax were the only source of local revenues. In fact, many localities receive some funds from other sources as well. Therefore, the mill rates shown in that column are not necessarily the actual tax rate in the locality shown. The only purpose of this column is to give the reader a general idea of the magnitude of actual disparities in tax rates among communities in the same State.

The columns headed "Federal, State, Local Amount/Percent" indicate the level of Government from which the disparities arise. Figures for these columns were also obtained from the N.E.F.P. Since most States have equalizing formulas, the amount of State funds allocated to the poorer districts typically exceeds

the amount of State revenues allocated to the wealthiest school
wealthy communities more than make up for this disadvantage by r
own local sources. Typically, wealthier communities have lower
do poorer communities within the same State. (The overall effec

f State revenues allocated to the wealthiest school districts. However, as these charts show, unities more than make up for this disadvantage by raising very large amounts of money from their urces. Typically, wealthier communities have lower actual tax rates, yet spend more per pupil than mmunities within the same State. (The overall effects of Federal revenues cannot be ascertained from trict samples.)

COST OF RAISING PER-PUPIL EXPENDITURE TO VARIOUS PERCENTILE LEVELS

art for each State shows the costs of raising per-pupil expenditures to various percentile levels. this table came from State-provided enrollments and expenditure figures.

ions included in this series represent an attempt to determine the approximate level of funding that uired to equalize per-pupil expenditures within each State, up to various percentile levels. At the hould be recognized that these amounts are derived from State data containing cost elements not neces- rable among the school districts within each State. For example, the basic per-pupil expenditure data ral funds in certain districts and not in others; non-instructional costs, such as transportation, vary among the districts; and the type of programs vary considerably among the districts. Accordingly, shown are rough approximations, and are provided more as a frame-of-reference than a definitive amount.

required to raise per-pupil expenditures to various percentile levels have been calculated by:

aying all pupils in the State by per-pupil expenditure levels;

ablishing percentile levels based on the number of pupils;

minating the top 5 percent and bottom 5 percent, as being atypical; and

sing the per-pupil expenditure amount for those pupils below the various percentile
els up to those levels.

of pupils" indicated at each percentile level includes all pupils for whom per-pupil expenditure is e expenditure at the percentile level, exclusive of the bottom 5 percent of the enrollment.

t be reiterated that the costs of equalization are stated as each State itself defines their per- iture. There has been no attempt to make per-pupil expenditure calculations comparable within and , and the indicated costs of equalizing certain portions of any State's enrollment are to be considered imations.
